Victor Reinz® Holds Training Program for Customers in South Africa

Representatives from Victor Reinz® hosted a training program for customers in South Africa to teach them technical details about Victor Reinz products. The program was planned for mechanics, and wholesale and retail customers.

The training sessions took place July 25-27 in the cities of Johannesburg, East Rand, and Pretoria, all located in the Gauteng province of South Africa. There were 60 to 100 participants at each venue listening to presentations and participating in workshops.

Each of the sessions kicked off with an overview of Dana, and shifted into an in-depth presentation on Victor Reinz technology. The technical training provided a synopsis of products manufactured, including previous cylinder-head gaskets compared to modern composite cylinder-head gaskets, and an explanation of technologies like the Multi-layer Steel cylinder-head gaskets, Wave-Stopper® sealing technology, and backland stopper sealing technology.

The sessions also educated participants on damage analysis, including ways to detect gasket failures, locate the source of a failure and resolve the issue, and the importance of cylinder-head bolts for re-assembling engines. Attendees also learned about turbocharger-mounting kits and an overview of the chemical program available that Victor Reinz offers.
